

Participants Needed for Research Study

An Examination of the Relationship between Sensory Processing and Emotional Regulation in Children with Autism

What We Do: A research study is to.....

- a. Look at how typically developing children and children with autism/autistic spectrum disorder process different sensory information, such as sound, and regulate different emotion, such as happy.
- b. Examine if the ability to process sensory information is related to ability to regulate emotion.

Who Can Help: We are seeking parents with a child between the ages of 5-10

- a. Either typically developing (no any disabilities, no any disorders)
- b. Or Autism/Autistic spectrum disorder
- c. And be able to complete one-time surveys regarding their child's behavior

How Much Time Will the Study Take: Estimated 40 or 45 minutes.

Why Help: Participating in this research study will help to develop new knowledge about autism and how occupational therapist can work with autism children in treatment. All information shared will remain anonymous and confidential.

**Please contact Ashley Fischer, OTS
Creighton University, Department of Occupational Therapy
at 847.340.9321 or at ashleyfischer@creighton.edu**

This study will be conducted by Creighton University occupational therapy students under guidance from a license occupational therapist (Dr. Wen-Pin Chang, OTR/L)
